

## Media Release: Allianz Climate Risk Award: “Science plays a crucial role in addressing climate risk”

- Award supports aspiring researchers in the field of climate risk
- Allianz Research Fellowship announced for 2023

---

Munich, December 14, 2022

Allianz Re has for the sixth time awarded the Allianz Climate Risk Award to four aspiring academic researchers in the field of climate risk. The 2023 winner is Emily Vosper, University of Bristol, for her work on machine learning for explainable tropical cyclone downscaling and future climate risk management.

**“It is clear that climate change is the key risk of our time, and science plays a critical role in addressing this risk,” says Holger Tewes-Kampelmann, CEO of Allianz Reinsurance. “The work of scientists such as those we are awarding helps us to better understand climate change and, more importantly, how we can help to quantify and adapt to the associated risks.”**

Chris Townsend, Allianz SE Board Member for Global insurance Lines, Anglo Markets, MENA and Africa, emphasized the role of science in his welcome address: “The findings from science remain an invaluable asset in protecting humanity against the risks of climate change. We trust in ambitious scientists like the four finalists of the Allianz Climate Risk Award. Their dedication makes a real difference for the most vulnerable and helps us to evolve risk protection solutions for our customers.”

The annual Allianz Climate Risk Award recognizes the work of twelve scientists of which four are selected to present their work to an interdisciplinary jury that includes experts from in- and outside of Allianz for a final ranking and cash awards. The jury awarded the second prize to Daniel T. Kahl, University of Irvine, for his work on combining flood models with population vulnerability, followed by Peter Pfeleiderer, Hamburg University, for his work on Atlantic hurricane year-to-year variability and Mona Hemmati, Columbia University, for her work on a comprehensive tropical cyclone risk model.

**“Understanding forward-looking climate science is crucial in mitigating the systemic effects of physical climate risk,” says Sibylle Steimen, Managing Director Advisory & Services, Allianz Reinsurance. “At Allianz Re, our job is to make sure that the latest scientific insights are used to make better decisions to protect our customers.”**

The jury for the 2022 Allianz Climate Risk Award included Line Hestvik, Allianz Group Sustainability Officer, Holger Tewes-Kampelmann, CEO Allianz Reinsurance, Sibylle Steimen, Managing Director Advisory & Services, Allianz Reinsurance, Markus Stowasser, Global Head of Catastrophe Risk Management, Allianz Reinsurance, Prof. Dr. Ralf Ludwig, Chair of Geography and Geographical Remote Setting, and Nina Ridder, the winner of the 2021 Allianz Climate Risk Award.

On the day of the Award, Holger Tewes-Kampelmann announced Allianz Re’s new initiative to support climate science research: **“To complement the Allianz Climate Risk Award and to more proactively support research that is linked to our business, I am excited to launch the Allianz Research Fellowship as of next year. This Fellowship is tailored to drive innovative research projects on topics aligned with our climate change risk strategy and is open to researchers from universities and research institutes worldwide,”** says Tewes-Kampelmann. Allianz Re will fund a 1-year research project in close partnership with the company.
